

We would like to take this opportunity to thank Ocean Steel for the great job at the Picadilly Potash Mine Project. Not just on the quality and efficiency of your workmanship but first and foremost on your commitment to Health and Safety.

Over the past three years we have been emphasizing safety on our project. Ocean Steel has been a pleasure to deal with due to your attitude towards safety and the safety culture of your organization. Your group demonstrates a proactive approach towards safety and that's what makes this safety culture work.

Structural steel erection being one of the most hazardous occupations and environments in which to work, we commend you on your milestone of three years and almost 300,000 man hours without a lost time accident on our project. This accomplishment is a direct result of your supervision's & management's good leadership qualities, organization, risk recognition and ability to react quickly to safety concerns. Your team works hard to maintain critical path schedules, but never at the expense of taking shortcuts on safety.

We at AMEC would be pleased, and would highly recommend working with you on future projects.
